PROFESSIONAL SUMMARY

Software Engineering graduate with 8 months of internship experience building enterprise integration and Kafka-driven distributed systems. Developed AI-powered developer platforms using Java/Quarkus and TypeScript/Next.js, with production experience in CI/CD, Docker, and Azure cloud deployment.

PROFESSIONAL EXPERIENCE

Software Engineer Intern — Datasabai Thailand Dec 2025 – Jul 2026

- Built internal SDK modules for enterprise integration: an EDI specification scraper (EDIFACT/X12/VDA) and a SAP IDoc (WE60) parser with structured schema mappings.
- Designed and built Changelog Composer, an AI-powered release automation platform (Java 25, Quarkus, React, PostgreSQL, SSE, NVIDIA NIM) with AI caching.
- Extended the company's VS Code integration extension with a React Flow-based visual workflow editor, improving workflow visualization, usability, and UI consistency.
- Implemented CI/CD and deployment using GitHub Actions, Azure DevOps, and Docker, with automated health checks and rollback support for reliable Azure VM deployments.

FEATURED PROJECTS

J Track — Job Tracking Platform

- Built a microservices-based job tracking platform with Auth, User, Job, and utility services, using transactional outbox → Kafka, idempotent consumers, retries, and DLQ/replay for reliable processing.
- Implemented Redis caching/rate limiting and AI-powered job matching; built GitHub Actions CI/CD with Trivy security scanning and automated Azure VM deployment with reliable release workflows.

Edupro — Multi-Tenant E-Learning SaaS

- Built a secure multi-tenant e-learning SaaS (Next.js 16, React 19, TypeScript, Prisma 7, PostgreSQL) with 30 data models, 92 API routes, two-axis RBAC/tenant authorization, and remediation of 17 cross-tenant vulnerabilities including IDOR and BOLA through comprehensive authorization controls.
- Implemented AI-powered learning roadmap generation via NVIDIA NIM with clarification loops, deterministic fallbacks, Stripe checkout and webhooks, Cloudinary media pipeline with magic-byte validation, JWT/TOTP auth, Redis rate limiting, idempotent QStash background jobs

workflow-mcp — Visual AI Workflow Builder

- Built a full-stack visual AI workflow builder (Next.js 16, React 19, TypeScript, MongoDB, React Flow) for multi-step LLM agent workflows with conditional branching and variable templating.
- Engineered a durable execution engine on QStash with topological-sort DAG scheduling, cycle detection, per-step retries, and dual cancellation (AbortController + Redis); streamed live execution over SSE.

TECHNICAL SKILLS

Programming Languages: Java, TypeScript, JavaScript, SQL
Backend: Quarkus, Node.js, Express.js, REST APIs
Frontend: React, Next.js, Tailwind CSS, Redux Toolkit
Databases: PostgreSQL, MongoDB, Redis, MySQL
DevOps & Tools: Kafka, Docker, GitHub Actions, Azure DevOps, Azure Pipelines, Azure VM, Git

EDUCATION

Mae Fah Luang University 2022–2026
Bachelor of Engineering in Software Engineering GPA: 3.79/4.00

ADDITIONAL INFORMATION

Languages: English (Fluent) · Burmese (Native) · Thai (Basic)
